

## PROJECT

## Creating Customer Segments

A part of the Machine Learning Engineer Nanodegree Program

## PROJECT REVIEW

## NOTES

## Meets Specifications

## SHARE YOUR ACCOMPLISHMENT

Excellent work! You put a lot of effort into this and it shows. Congratulations and best of luck with your next project.

## Data Exploration

Three separate samples of the data are chosen and their establishment representations are proposed based on the statistical description of the dataset.

Awesome

- Good job selecting 3 sample observations
- Each observation is discussed along with proposed establishment representations using the median statistic.

A prediction score for the removed feature is accurately reported. Justification is made for whether the removed feature is relevant.

Awesome

- You're absolutely right either Detergents\_Paper or Grocery's relatively high score implies one or both are largely irrelevant since they can be predicted to a high degree by the other features and each other.

Student identifies features that are correlated and compares these features to the predicted feature. Student further discusses the data distribution for those features.
